

Leumeah

“The people I dealt with were really easy to deal with... Because we were right at the start of COVID, we have never met face to face, but everything from applying for the grant, to what size, number of panels, installation, testing, approval etc just flowed beautifully.”

Annual Energy Savings

6,071 kWh

Annual Carbon Reduction CO₂

8,195 kg

Case Study

Leumeah

Savings

\$1,083 annually

Through the Solar Savers initiative, Leumeah was recommended to eko energy as a solar provider trusted and vetted by a number of councils in Victoria.

Challenge

Leumeah was looking to reduce her environmental footprint as well as her electricity bills. She attended an information session hosted by Solar Savers at her local library on solar systems and the rebates available for Victorian homeowners.

Solution

Interested in the fantastic impact of solar on bills and the environment, Leumeah got a quote from eko energy for a 3.96kW solar PV system that will save her more than \$1,000 each year, while generating over 6MWh and mitigating more than 8 tonnes of carbon emissions annually. That's emissions equivalent to growing 136 seedlings for 10 years!
